

# ABSTRACT OF THE DISCLOSURE:

~~The present invention, related to a~~ A stereophonic apparatus having a multiple switching function which mixes the sound signals output from multiple sound apparatuses to output them at once and enables to output multiply or selectively, has an audio signal generating unit for generating an audio signal, a sound signal controlling unit for outputting a sound signal to a sound signal input terminal of an external sound apparatus and controlling a path of a sound signal output from a sound signal output terminal of ~~[[said]]~~ the external sound apparatus, a mixing unit for generating a mixed sound signal by mixing an audio signal input from ~~[[said]]~~ the audio signal generating unit and a sound signal input through ~~[[said]]~~ the sound signal controlling unit, an audio amplifying unit for amplifying a mixed sound signal input from ~~[[said]]~~ the mixing unit, and an output unit for outputting a mixed sound signal amplified by ~~[[said]]~~ the audio amplifying unit.

**ABSTRACT OF THE DISCLOSURE:**

A stereophonic apparatus having a multiple switching function which mixes the sound signals output from multiple sound apparatuses to output them at once and enables to output multiply or selectively, has an audio signal generating unit for generating an audio signal, a sound signal controlling unit for outputting a sound signal to a sound signal input terminal of an external sound apparatus and controlling a path of a sound signal output from a sound signal output terminal of the external sound apparatus, a mixing unit for generating a mixed sound signal by mixing an audio signal input from the audio signal generating unit and a sound signal input through the sound signal controlling unit, an audio amplifying unit for amplifying a mixed sound signal input from the mixing unit, and an output unit for outputting a mixed sound signal amplified by the audio amplifying unit.
